Abstract

The main objective of this keynote is to provide a set of governance recommendations contributing to the successful transformation into a Smart World. The recommendations are: balancing governance approaches; providing right answers to right questions: demand driven supply; managing data clouds with individuals; focusing on solutions to solutions; and investing in interdisciplinarity. Each of the recommendations will be introduced and explained. At the end of the keynote, conference participants are going to have to respond to 10 propositions related to the governance of smart world.

Keywords: Smart World, demand driven supply, data clouds, solutions to solutions, interdisciplinarity
