ICA Map Projections Wiki
UPCOMING EVENTS

SDI Days 2018 and 14th International Conference on Geoinformation and Cartography

Zagreb, September 27-29, 2018
PSEUDOCYLINDRICALS

Pseudocylindrical projection is a map projection in which the meridians of the normal aspect are mapped as the curves symmetrical about the straight central meridian, and the parallels as mutually parallel straight lines perpendicular to the central meridian.

There are many different pseudocylindrical projections. One of them is the Mollweide projection.

Map of the World in the Mollweide projection is used for designing the logo of the International Cartographic Association

- ICA
Choosing a Map Projection

Editors: Lapaine, Miljenko, Usery, E. Lynn (Eds.)

Offers a guide to selecting map projections for non-technical users
ICA Commission on Map Projections

Meeting in Sozopol, 2018
Waldo Tobler, 1930-2018
Prof. Emeritus Waldo Tobler, one of the greatest modern geographers and cartographers, died in Santa Barbara on 20 February 2018, at the age of 88.

First Law of Geography:
Everything is related to everything else, but near things are more related than distant things.

Second Law of Geography:
The phenomenon external to an area of interest affects what goes on inside.
In the future
Study terminology on map projections and maintain the online multilingual dictionary for this area of cartography.

Mapping is …
Promote proper use and understanding of map projections at all levels of education.

*Expected result:* a publication (e-book) with a recommended approach to map projections at different levels of education.
Next meeting

ICC2019, Tokyo, 1-5 July, 2019
Thank you!
